Forming Scrum Team

*If your team can't be fed by two pizzas,
then it's too big*
(Jeff Bezos)

Scrum Team Size

The Scrum Team is small enough to remain nimble, typically 10 or fewer people. Smaller teams communicate better and are more productive. If Scrum Teams become too large, consider reorganizing into multiple cohesive Scrum Teams

Many Skillset within a Single Team

The Scrum Team are large enough to complete significant work within a sprint.

The Scrum team also cross-functional, meaning the members have all the skills necessary to deliver value.

Independent & Capable

The scrum team responsible for all product related activities including

- Stakeholder engagement
- Research and development
- Operations and maintenance

Individual team members may have specialized skills and area of focus

But accountabilities belongs to the team as a whole

If you tell people where to go but not how to get there, you'll be amazed by the results
(George S Patton)

The best architectures, requirements, and designs emerge from self-organizing teams
(Agile Principles #11)

Self-Managed Team

	Manager-led teams	Self-managing teams	Self-organizing teams	Self-governing teams
Setting overall direction for the team				
Designing the team and its context				
Managing work process and monitoring progress				
Executing the team tasks:				

Team empowered and have the autonomy to plan and decide who does what, when and how

The team can select whatever structure, techniques and methodologies to monitor and manage their processes and progress in achieving their goal

The Scrum Master should support the team being self-managed and focus towards their goal

Psychological Safety

Psychological safety needed to empower the team and promote self-management

- Approach as collaborator, not adversary
- Respect as human being
- Blamelessness, replace with curiosity
- Ask for feedback
- Do measurement

Scrum Accountabilities

Meet the Scrum Team

PRODUCT OWNER

The Product Owner is accountable for maximizing the value of the product resulting from the work of the Scrum Team

DEVELOPERS

Developers are the people in the Scrum Team that are committed to creating any aspect of a usable Increment each Sprint

SCRUM MASTER

Scrum Masters are true leaders who serve the Scrum Team and the larger organization

The Product Owner

Is one person, not a committee and accountable for :

- Developing and explicitly communicating the Product Goal
- Creating and clearly communicating Product Backlog items
- Ordering Product Backlog items with the highest value first
- Ensuring that the Product Backlog is transparent, visible and understood

Developers

The people in the Scrum Team that are committed to create usable increment each sprint and accountable for :

- Creating a plan for the Sprint, the Sprint Backlog
- Instilling quality by adhering to a Definition of Done
- Adapting their plan each day toward the Sprint Goal
- Holding each other accountable as professionals

The Scrum Master

Accountable for establishing Scrum both within the team and throughout the organization by helping everyone understand Scrum in both theory and practice

Accountable for Scrum Team's effectiveness by enabling them to improve its practices within the Scrum framework

Serve both the Scrum Team and the entire organization

Serve the Scrum Team

- Coaching the team members in self-management and cross-functionality
- Helping the Scrum Team focus on creating high-value Increments that meet the Definition of Done
- Causing the removal of impediments to the Scrum Team's progress
- Ensuring that all Scrum events take place and are positive, productive, and kept within the timebox

Serve the Product Owner

- Helping find techniques for effective Product Goal definition and Product Backlog management
- Helping the Scrum Team understand the need for clear and concise Product Backlog items
- Helping establish empirical product planning for a complex environment
- Facilitating stakeholder collaboration as requested or needed

Serve the Organization

- Leading, training, and coaching the organization in its Scrum adoption
- Planning and advising Scrum implementations within the organization
- Helping employees and stakeholders understand and enact an empirical approach for complex work
- Removing barriers between stakeholders and Scrum Teams

Accountabilities**

3

**Managing
Stakeholders
Engagement**

Stakeholder Engagement

Who are The Stakeholders?

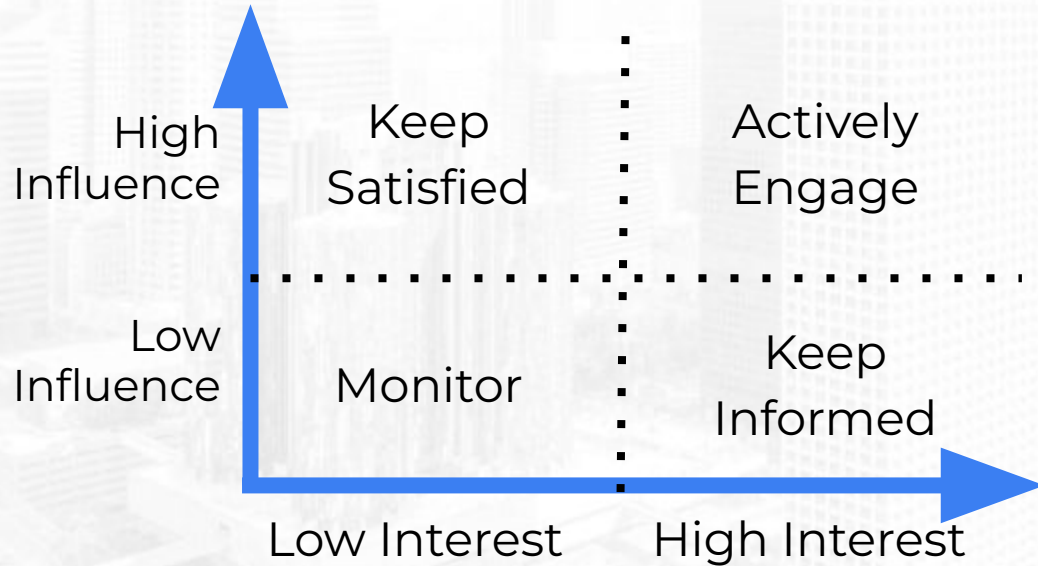

- The Users – The person who actually use the product
- The Internal customers – The people responsible to fund decisions for the product development
- The External Customer – The people responsible to pay the use the product

Actual Stakeholders? Or just your Audience?

When is someone a really stakeholder

- Are they going to use or are they using the product on a regular basis?
- Are they investing significantly in the development of the product?
- Are they personally invested in solving a challenge that your product addresses?

Stakeholders Map

- Identify your stakeholder
- Map them into their respective quadrant
- Address each area appropriately
- Monitor for context shifting

Customer Collaboration

Collaboration – two or more people working **together** to achieve the same **goal**

Agile Value #3
Customer
Collaboration over
Contract Negotiation

Agile Principles #4
Business people and
developers must work
together daily
throughout the
project

**User (Customer)
Persona**

User Journey

Product Goal

User (Customer) Journey

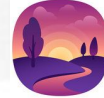

Keep remember your own CONTEXT

A **user (customer) journey map** examines the relationship between a customer and an organization, brand, or product over time. It's a research-based tool which takes all touchpoints and channels of interaction into account

NEW PRODUCT

EXISTING PRODUCT

Persona Daily Journey Example

Activity

Wake up, still sleepy due to Andy is not a morning person

Join several Classes & takes some notes

Go to gym to exercise & relax

Time for homework, & prepare for tomorrow

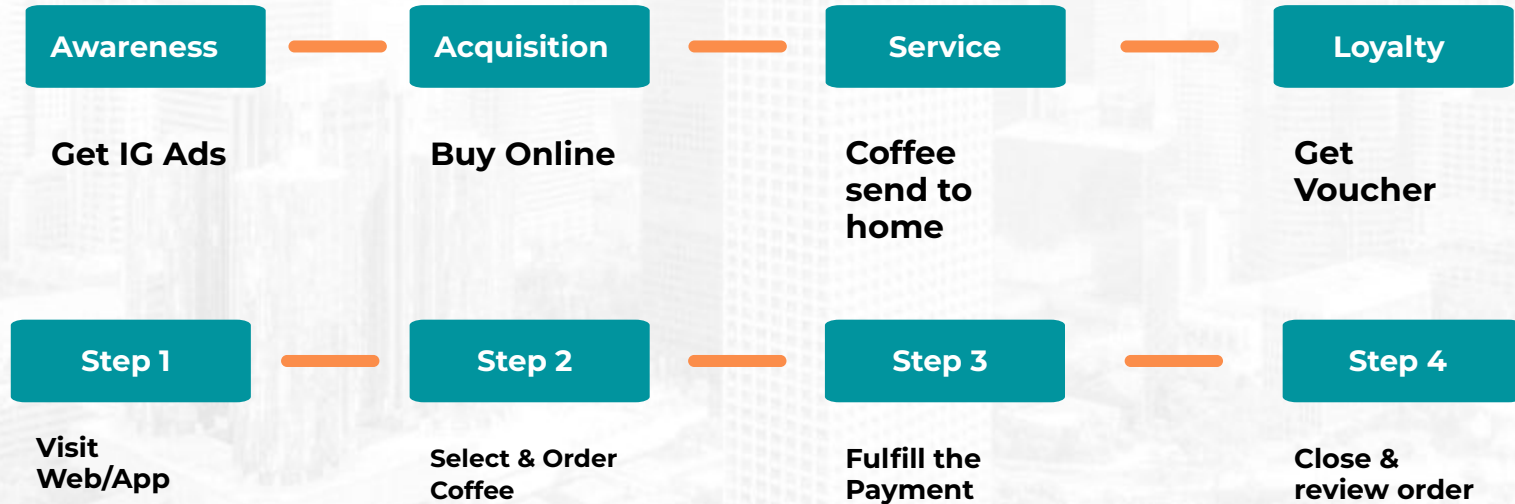

Touchpoint

User Journey Map - Product Based

Scenario: After workout, Danny need to buy some Coffee

The Big Question

What are the Problems that we can found in every Steps?

Can we solve it, to give impact to the Users

Outline

**User (Customer)
Persona**

User Journey

Product Goal

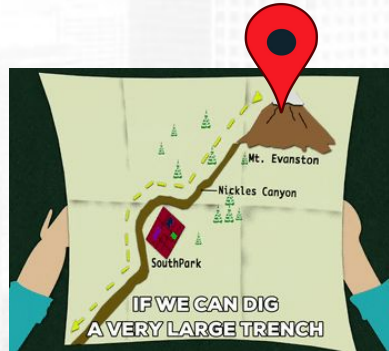

Product Goal

“A **product is a vehicle to deliver value. It has a clear boundary, known stakeholders, well-defined users or customers. A product could be a service, a physical product, or something more abstract.”**

- ScrumGuide.Org

Product Definition in Scrum

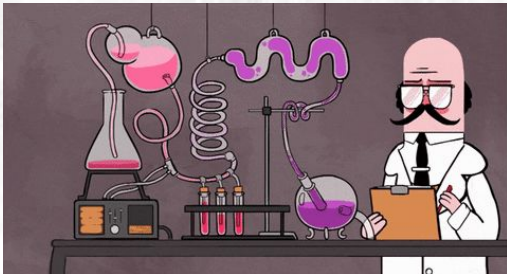

Product Goal in an Organization

Product Vision
long term strategic goal

Product Goal
Intermediate goals

Sprint Goal
immediate tactical goals

Defining SMART “Product” Goal

The Product Goal describes a future state of the product which can serve as a target for the Scrum Team to plan against..... They must fulfill (or abandon) one objective before taking on the next.

Product Goal Template Example

PRODUCT GOAL

product name

has a goal to

problem to be solved

We know we have achieved the goal when we see:

outcome numbers

at

date to validate

7:26 / 8:25

Summary

Why need to define our user, thus we can explore their needs

In order to understand our user, we need to have an Empathy to our user. By visualize their journey & validating it, we can find any momentum that can be use to define our Product

Product is a vehicle to deliver value in scrum. Every Product have a Goal that aligned with the Organization's vision. A SMART Product Goal will help all related parties chasing a same direction.

Management**

Product Roadmap

Product Roadmap

What is a Product Roadmap ?

A high-level visual that maps out the evolution of your product over time. It can be used as a shared source of truth that outlines the vision, direction, priorities, and progress of a product over time.

Product Roadmap

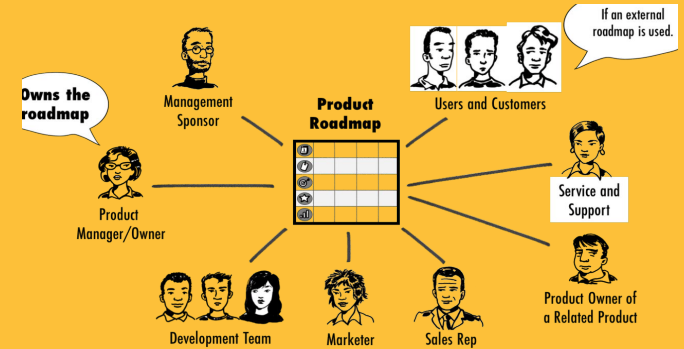

Why is it Important ?

Serves as a helpful guide for teams to plan tasks and execute on the strategy. A plan of action that aligns the organization around short and long-term goals for the product or project, and how they will be achieved

Product Roadmap

Who create
the Product
Roadmap?

The process works best
when **collaboration is at
front**

Product Roadmap

Who own the Product Roadmap?

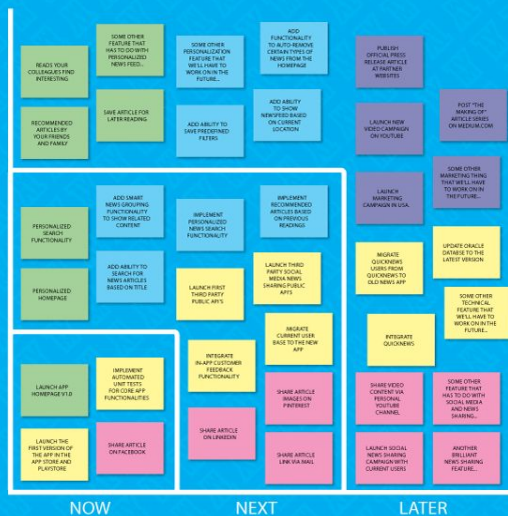

The roadmap owner is not only responsible for being as inclusive as possible, but for filtering all the input so that goals, features and timelines can all be changed as necessary. Then it's a matter of sharing the roadmap at the appropriate time so that no one is taken by surprise on where a particular release is at.

Product Roadmap Practices

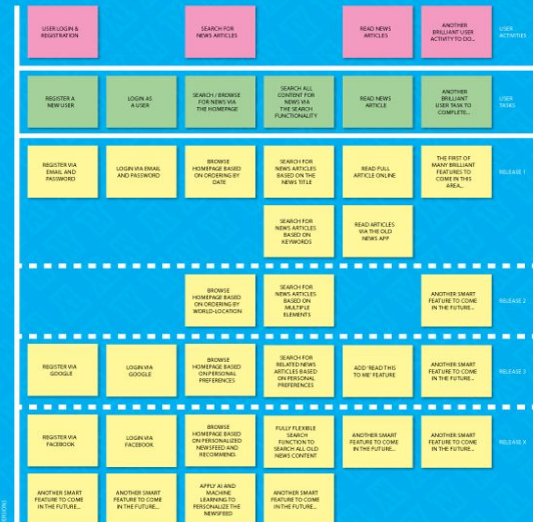

THE GOAL-ORIENTED PRODUCT ROADMAP

	Q1	Q2	Q3	Q4
DATE / VERSION	BRONZE 01-01-2020	SILVER 01-04-2020	GOLD 01-07-2020	PLATINUM 01-10-2020
GOAL	LAUNCH MVP WITH AT LEAST 1000 EARLY ADOPTER USERS	IMPROVE EARLY ADOPTER USER SATISFACTION TO AN 8+ ON AVERAGE	CONVERT 50% OF EARLY ADOPTERS TO A PAYING MEMBERSHIP WITH AT LEAST A BASIC SUBSCRIPTION	INCREASE USER BASE WITH AT LEAST 1000 MORE PAYING SUBSCRIBERS (AT LEAST BASIC MEMBERSHIP)
KEY FEATURES	- HOMEPAGE WITH TOP 10 MOST READ ARTICLES - SHARE WITH YOUR FRIENDS VIA SOCIAL MEDIA	- SAVE ARTICLES FOR LATER READING - LAUNCH IN-APP CUSTOMER FEEDBACK FUNCTIONALITY	- PERSONALIZED SEARCH FUNCTION - MIGRATE CURRENT USER BASE TO NEW APP VERSION - LAUNCH FIRST THIRD-PARTY APPS	- LAUNCH MARKETING CAMPAIGN IN USA - SUBSCRIPTIONS IN THE NEW APP - INTEGRATE QUICKNEWS
METRICS	# APP DOWNLOADS # REGISTERED USERS # SOCIAL MEDIA MENTIONS	- IN-APP CUSTOMER SATISFACTION SCORE - CUSTOMER SATISFACTION SURVEY	- IN-APP CUSTOMER SATISFACTION SCORE % PAYING USERS OF ALL USERS # REGISTERED USERS	- IN-APP CUSTOMER SATISFACTION SCORE % PAYING USERS OF ALL USERS # REGISTERED USERS

THE NOW-NEXT-LATER ROADMAP

THE STORY MAP

Product Roadmap

Stick to the Product Goal

- ✓ **Vision** : What are we doing next ?
- ✓ **Strategy** : What's the actual plan ?
- ✓ **Objectives** : Why are we doing this now ?

Now-Next-Later

Product Roadmap

Objectives

**Advertise the
Coffee Shop**

**Increase
Transaction**

**Extend user
time in web**

**Enhance user
experience**

NOW	NEXT	LATER
Coffee Shop Profile	Connect	Share with Friends
Order Coffee	Customer Reviews	Download App
Map	Connect to Social Media	User Experience Setting

Product Roadmap Tips

Goal Oriented

The goals state the specific value a product is likely to create and therefore communicate why it is worthwhile to progress it

Shared

Note that collaborative roadmapping does not mean that everybody gets their way or is necessarily super happy with every single decision

Actionable

The best way to achieve this is to base the plan on a validated product strategy, a strategy whose key assumptions have been tested.

Mature product	Review quarterly	Review every 3 to 6 months
	Review monthly	Review quarterly
Young product	Dynamic market	Stable market

ROADMAP ≠ FIXED RELEASE PLAN

Roadmap means a set strategy. Agile means figuring out and adjusting your strategy along the way.

**Product
Roadmap**

MVP & Iteration

**Product Backlog
Management**

MVP & Iteration

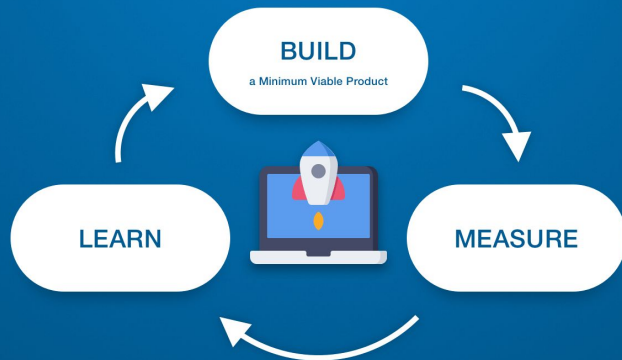

The MVP

Minimum Viable Product

The MVP was introduced by Eric Ries, is a product with just enough features to gather validated learning for its continued development (Ries, 2011). MVP allow us to discover what customers really want instead of spending all of our time and money building something they might want.

3 main principles of MVP

Iterative vs Big Bang Approach

BIG BANG

© 2015 Scrum & Kanban Ltd.

- Risks are mitigated earlier
- Risks are mitigated earlier

ITERATIVE

Spotify launches in the US.

How to Define MVP

- ✓ Make sure your planned MVP aligns with your business objectives
- ✓ Start identifying specific problems you want to solve or improvements you want to enable for your user persona
- ✓ Translate your MVP functionality into a plan of development action

Outline

**Product
Roadmap**

MVP & Iteration

**Product Backlog
Management**

Product Backlog Management

Product Backlog

Management

Backlog management is the process through which product owners add, adjust, groom, and prioritize the backlog to make sure the most valued features are shipped to users.

Product Backlog

Prioritization

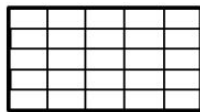

Four useful factors to prioritise the product backlog :

- Value
- Risk & Uncertainty
- Realisability
- Dependencies

Product Roadmap vs. Product Backlog

Product Roadmap

Strategic plan: describes how the product is likely to grow over a longer timeframe, say, 12 months.

Product Backlog

Tactical tool: provides epics, user stories plus other details necessary to progress the product.

PB Ordering Practices

Many methods exist:

ICE, MOSCOW, KANO, User voice (Voting), buy a feature (crowd funding), etc...

$$\text{ROI} = \text{Value} / \text{Investment}$$

1. **Value** is not just about money
2. **Investment** is not just about Effort <- size is only this
3. **Ordering** is not just about individual ROI

Product Backlog Refinement

What is Product Backlog Refinement ?

This is an ongoing activity to add details, such as a description, order, and size. Attributes often vary with the domain of work.

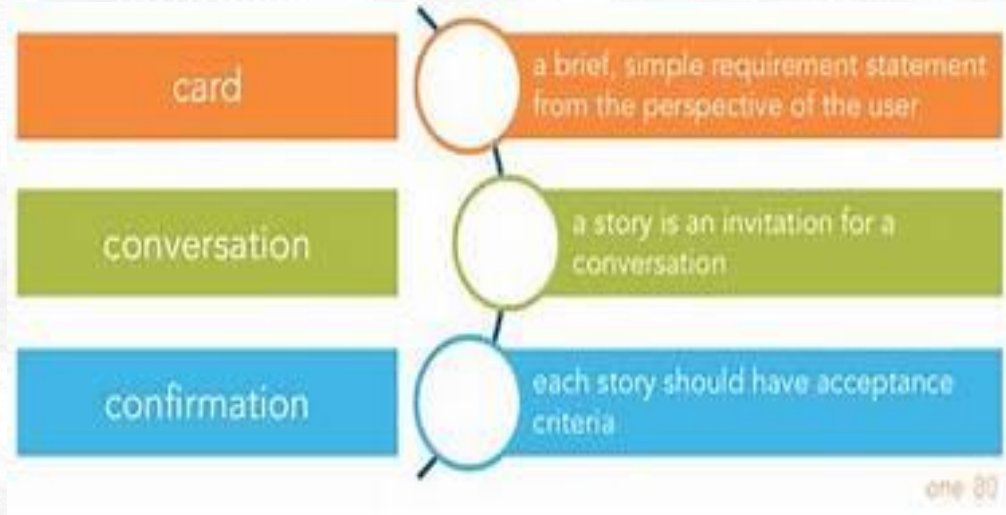

User Story

The 3Cs of a Story

User stories have three critical aspects. We can call these Card, Conversation, and Confirmation.

User Story

What Makes a Good Story?

The acronym INVEST helps to remember a widely accepted set of criteria, or checklist, to assess the quality of a user story

INVEST by Bill Wake

14

Independent

- Of order of user story delivery
- Of internal and especially external dependencies

Negotiable

- Flexible scope
- None specific language
- Explain the intention, not the implementation

Valuable

- Value is clear to everyone
- Persona matches Benefit & Goal will deliver the benefit.
- Avoid technical / role specific language

Estimatable

- Clear and concise explanation
- Avoid technical / role specific language

Small

- Easily fits into a Sprint. i.e. < 20% of velocity.
- Definitely not > 33% of velocity

Testable

- Can be automated
- Avoid external testing / long test suites

User Story examples

BDD - Gherkin

Story card

User story

As a <role>

I want to <feature>

So that <benefit>

Acceptance criteria

Scenario

Given <initial context>

When <event occurs>

Then <ensure some outcomes>

Example:

Feature: Customer withdraws cash

As a customer,

I want to withdraw cash from an ATM,

So that I don't have to wait in line at the bank

Scenario: Account is in credit

Given the account is in credit

And the card is valid

And the dispenser contains cash

When the customer requests cash

Then ensure the account is debited

And ensure cash is dispensed

And ensure the card is returned

Scenario: Account is overdrawn past overdraft limit

Given the account is overdrawn

And the card is valid

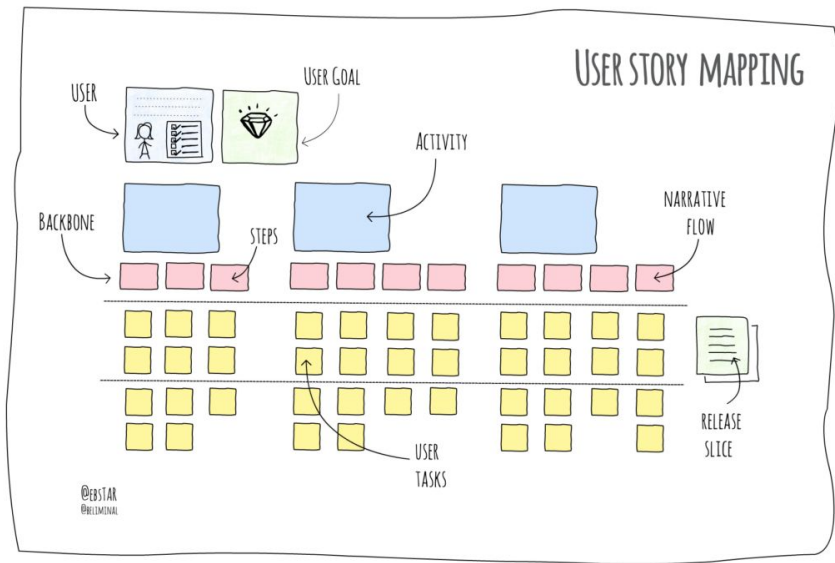

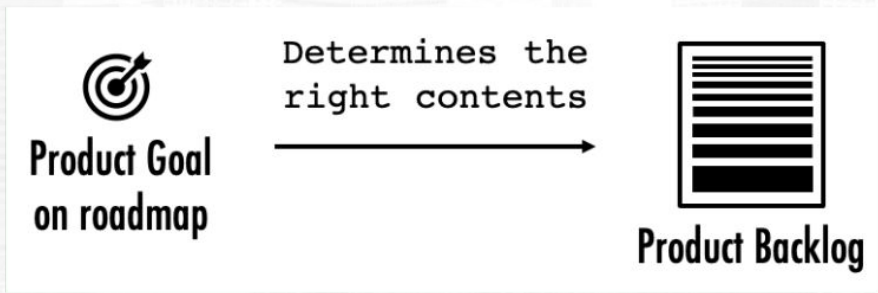

When the customer requests cash

Then ensure a rejection message is displayed

And ensure cash is not dispensed

And ensure the card is returned
